Accessing the Web of Science

Make sure you access Web of Science onsite or through a remote connection via your organization so you can benefit the full subscription to Web of Science. Otherwise, you will only have a free and partial access to Web of Science to see researcher profiles.

<http://www.webofscience.com/>

- Working on-site (IP range) – No credentials required
- Working remotely (3 options)
 - with VPN
 - via your organization's proxy authentication page
 - with your personal account

The landing page

Interface available in 9 languages

Easily navigate to other solutions

The screenshot shows the Clarivate Web of Science landing page. At the top left is the Clarivate logo. The main header includes 'Web of Science™' and a search bar. On the right, there are links for 'English' (with a dropdown arrow), 'Products', 'Sign In', and a 'Register' button. A vertical menu on the left side contains icons for home, search, user profile, and notifications. The main content area is divided into 'DOCUMENTS' and 'RESEARCHERS' tabs. Below the 'DOCUMENTS' tab, there is a search filter for 'Web of Science Core Collection' and 'Editions: All'. A search input field contains the text 'Example: liver disease india singh'. Below the search field are buttons for '+ Add row', '+ Add date range', and 'Advanced Search'. At the bottom right of the search area are 'Clear' and 'Search' buttons. A green callout box points to the search filter, and another points to the search input field.

Abstract

The financial crisis seriously damaged the reputation of the **banking** sector, as well as its profitability and risk of insolvency, which led many banks to adopt a **sustainable** approach aimed at balancing long-term goals with short-term performance pressures. This article analyses how **sustainable banking** practices affect the profitability and the insolvency risk of banks. Moreover, we examine how **sustainable** strategies determine the effects of market power and efficiency on bank profitability. We used a two-step System-GMM to analyze an unbalanced panel of 1236 banks from 48 countries over the period 2015-2019. We found that **sustainable banking** practices increased profitability, and market power was an important determinant of profitability among conventional banks, but not among **sustainable** banks. Higher levels of cost scale efficiency led to greater profitability for both **sustainable** and conventional banks. However, there was no significant relationship between **sustainable banking** and insolvency risk. These results indicate that the traditional determinants of bank profitability are not relevant in explaining the superior profits of **sustainable** banks, which suggests the emergence of a new paradigm related to sustainability among the drivers of bank profitability.

ADVANCED SCIENCE
Volume: 3 Issue: 3
Article Number: 1500213
DOI: 10.1002/advs.201500213
Published: MAR 2016
Document Type: Article

Abstract

Lithium metal batteries (LMBs) are among the most promising candidates of high-energy-density devices for advanced energy storage. However, the growth of dendrites greatly hinders the practical applications of LMBs in portable electronics and **electric vehicles**. Constructing stable and efficient solid electrolyte interphase (SEI) is among the most effective strategies to inhibit the dendrite growth and thus to achieve a superior cycling performance. In this review, the mechanisms of SEI formation and models of SEI structure are briefly summarized. The analysis methods to probe the surface chemistry, surface morphology, electrochemical property, dynamic characteristics of SEI layer are emphasized. The critical factors affecting the SEI formation, such as electrolyte component, temperature, current density, are comprehensively debated. The efficient methods to modify SEI layer with the introduction of new electrolyte system and additives, ex-situ-formed protective layer, as well as electrode design, are summarized. Although these works afford new insights into SEI research, robust and precise routes for SEI modification with well-designed structure, as well as understanding of the connection between structure and electrochemical performance, is still inadequate. A multidisciplinary approach is highly required to enable the formation of robust SEI for highly efficient energy storage systems.
